Air Fresheners

The Air Freshener Control is designed to help control odors that might develop in the trash. There are many **solid air fresheners** available on the market.

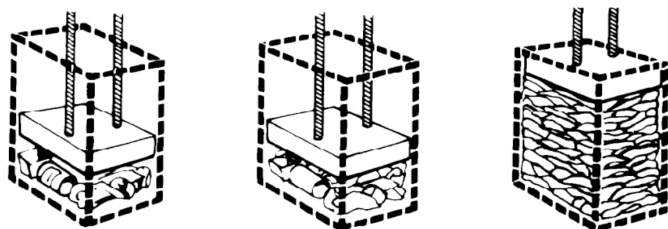

TU 8100 Model Series

- Raise the door
- Put in solid air freshener
- Set dial to NORMAL
- Move to MAXimum or MINimum if needed

TF 4600/TU 4100 Model Series

- Put "adjustable" air freshener in compartment
- Adjust according to directions
- Check air freshener occasionally, it should last 4 to 6 weeks

How the compactor works (in NORMAL Cycle)

The compacting ram does not go to the drawer bottom. You will not see compacting of the first few loadings.

Compaction starts after the drawer is about $\frac{1}{3}$ full. You may hear a noise when glass breaks. **Strong glass bottles may not break at all.**

The trash in a full compactor bag will be about $\frac{1}{4}$ the size of its original bulk.

Bottles or cans not placed in center may become caught between the ram and the drawer. The Drawer Monitor Switch senses a "misload," and will cause the ram to return to the "up" position without compacting. Load bulky trash, bottles and cans in the **center** of the drawer.
